Data Modelling and Form Design for a Business Application in Zoho Creator

17th August 2026

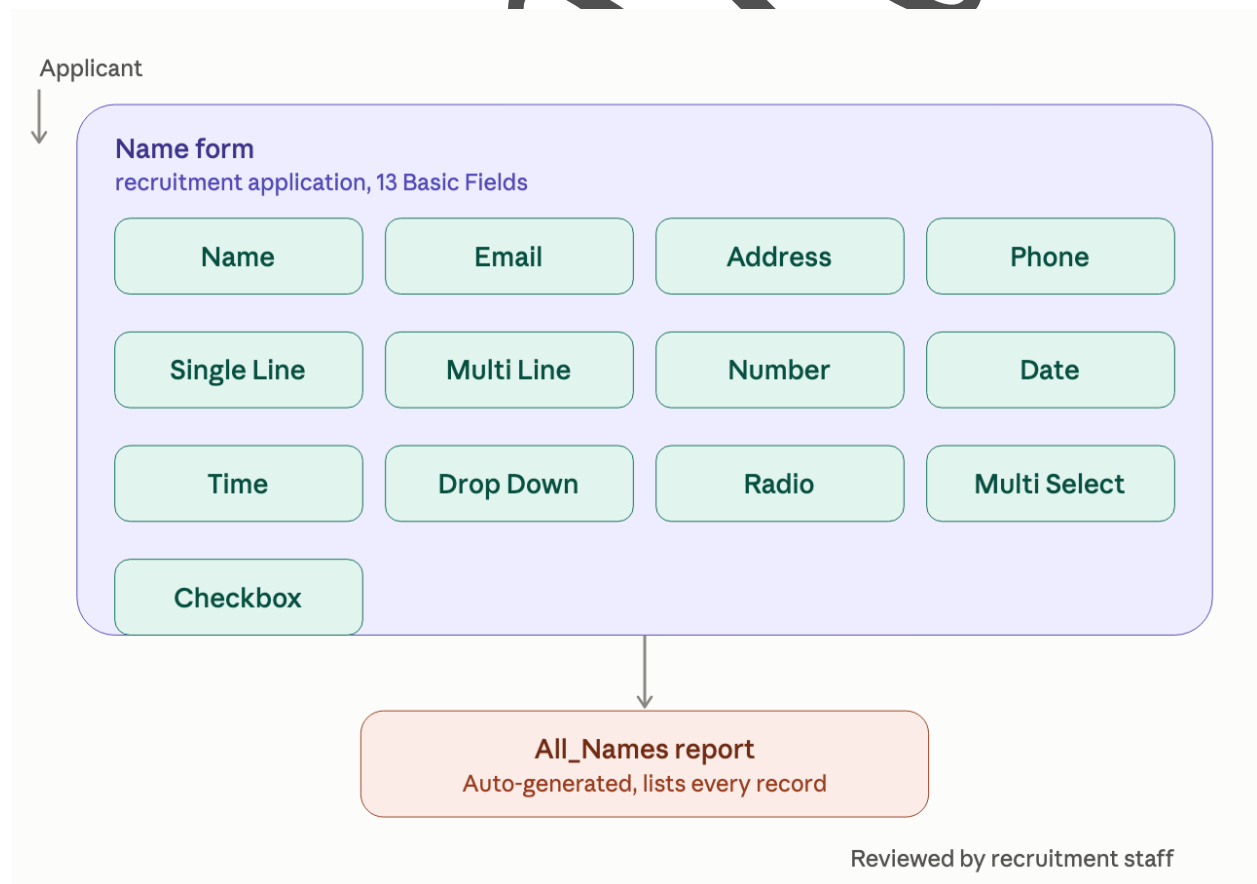

AJAYSHANKAR GIRIDHARAN

B.Tech CSBS

AIM

To design and build a functional “Recruitment Management Form” application in Zoho Creator that demonstrates the correct usage of all thirteen Basic Fields available in the Form Builder — Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox — and to model the underlying data structure of a recruitment intake workflow through a properly configured form and an auto-generated report view.

DIAGRARAM:

PROCEDURE

1. Application and Form Creation

- Logged into Zoho Creator and created a new application named “recruitment”.
- Inside the application, opened the Form Builder and created a form named Name, which holds all thirteen Basic Fields for the recruitment intake process.
- This automatically created a linked report, All_Names, which lists every submitted recruitment record.

2. Drag-and-Drop of Basic Fields

In the Form Builder, the Basic Fields palette was expanded on the left panel. Each required field was dragged from the palette and dropped onto the canvas in the order needed, then double-clicked to open its Field Properties panel for renaming and configuration, as listed below.

Basic Field	Field Name Set	Drag-and-Drop Configuration
Name	Name	Dropped onto canvas; enabled First Name / Last Name sub-fields; Last Name suffix display kept.
Email	Email	Dropped below Name; built-in email format validation left active.
Address	Address	Dropped after Email; default Address Line 1/2, City, State, Postal Code, Country sub-fields kept.
Phone	Phone	Dropped after Address; country code format set to India (+91).
Single Line	Single Line	Dropped after Phone; used as a short free-text entry field.
Multi Line	Multi Line	Dropped after Single Line; expanded text area for longer free text.
Number	Number	Dropped after Multi Line; plain numeric entry field.
Date	Date	Dropped after Number; standard date picker.
Time	Time	Dropped after Date; standard time picker.
Drop Down	Drop Down	Dropped after Time; choice list populated with sample options.
Radio	Radio	Dropped after Drop Down; mutually exclusive choice options added.
Multi Select	Multi Select	Dropped after Radio; multiple choice options added for multi-pick.
Checkbox	Checkbox	Dropped after Multi Select; single toggle option added.

3. Configuring Field Properties

- Selected the Name field and enabled the Last Name display option under Display Fields, in addition to the default First Name sub-field.
- Selected the Name field's Data Privacy section and marked it as Contains personal data (PII), since applicant names are personally identifiable.
- Opened the Address field properties and confirmed the default Address Line 1, City/District, State/Province, Postal Code, and Country sub-fields render correctly on the live form.
- Opened the Phone field properties and confirmed the country code defaults to India (+91) with a sample number format (81234 56789).

- Reviewed the Field name and Field link name for the Name field to confirm both were set consistently to “Name”.

4. Live Form Preview

Clicked the Preview / live-application icon in the Form Builder toolbar to view the applicant-facing form and verified that all thirteen Basic Fields render in order with the correct field types — Name (with First Name / Last Name split), Email, Address (with all sub-fields), Phone (with +91 country code), Single Line, and Multi Line.

5. Submitting Sample Records and Reviewing the Report

- Filled and submitted sample recruitment records through the live form to generate report data — one entry for “Nehal Sewing” and one self-entry for “AJAYSHANKAR GIRIDHARAN”.
- Opened the All_Names report from the Reports panel in list view and confirmed both records appear with Name and Email columns visible, showing “Showing 2 of 2” records.
- Opened each record individually and verified that every field — Single Line, Multi Line, Number, Time, Drop Down, Radio, Multi Select, Checkbox, Address, Phone, and Date — correctly stored and displayed the submitted values.
- Expanded the report's column view (Name, Email, Single Line, Multi Line, Number, Time, Drop Down) to confirm the tabular data grid mapped every submitted value to its corresponding field.

OUTPUT

The following screenshots capture the completed application: the Form Builder showing the Name field configuration, the live applicant-facing form preview, and the All_Names report containing the two sample submitted records.

1. Form Builder View — Name Field Configuration

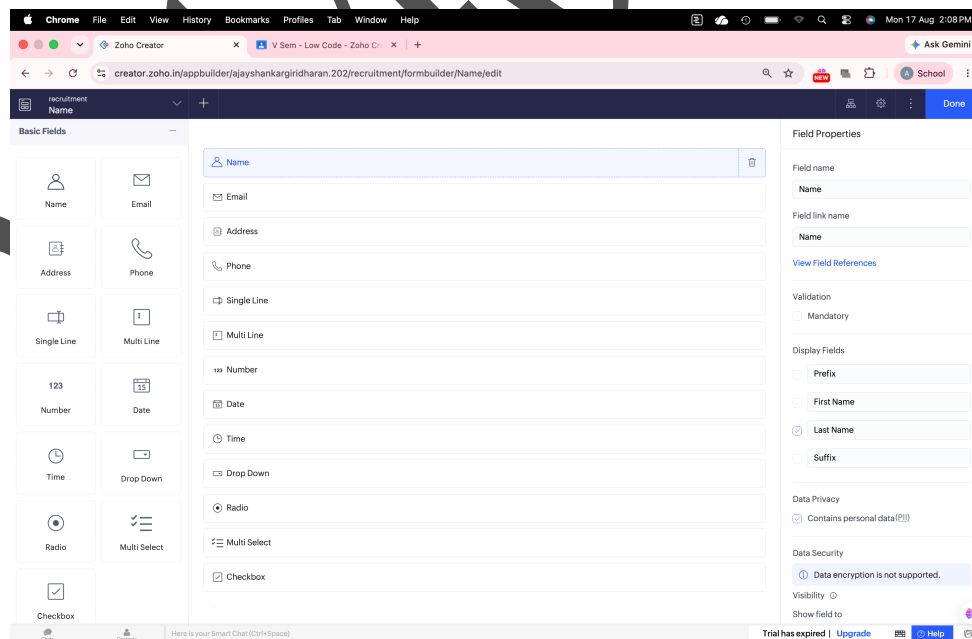

Fig 1. Form Builder — Basic Fields palette with the Name field properties open

2. Live Form Preview

The screenshot shows a web browser displaying the 'recruitment' app in development mode. The left sidebar has a 'Names' menu with 'Name' selected. The main area shows a form titled 'Name' with the following fields:

- Name: First Name, Last Name
- Email
- Address: Address Line 1, Address Line 2
- City / District, State / Province
- Postal Code, Country
- Phone: +91 81234 56789
- Single Line
- Multi Line

Fig 2. Live Preview — Name, Email, Address, Phone, Single Line and Multi Line fields

3. Report View — Individual Record (Sample Entry)

The screenshot shows the 'All Names' report in the recruitment app. The left sidebar has 'All Names' selected. The main area shows a table with two records. The 'Nehal Sewing' record is selected, and its details are shown in a side panel.

Fig 5. All_Names Report — grid view listing both submitted records across all fields

RESULT

A fully functional Recruitment application was successfully designed and built in Zoho Creator using all thirteen Basic Fields. The Name form correctly captures applicant details across Name, Email, Address, Phone, and other data-type fields, and the auto-generated All_Names report accurately reflects every submitted record, confirming that the form-to-report data flow works as intended.
