Bank Loan Application Form

Basic Fields Use Case

01 · AIM

To design and build a functional "Bank Loan Application Form" application in Zoho Creator that demonstrates the correct usage of all thirteen Basic Fields available in the Form Builder, while solving a real banking requirement of collecting and pre-screening loan applications in a structured manner

APPLICATION: Loan Application & Pre-Screening Management BASE FORM:

Loan_Application_Form

TOOL: Zoho Creator - Form Builder

02 · DESCRIPTION

The bank branch currently accepts loan applications through paper forms filled at the counter, leading to illegible handwriting, incomplete income details, and delays in routing applications to the correct loan officer based on loan type. There is no digital pre-screening step before the applicant is called in for document verification. The information needs were reviewed to design a digital solution that allows prospective borrowers to submit enquiries online.

241401007

- Loan_Application_Form : A single online form capturing personal identity, contact details, employment and income details, loan requirements, existing liabilities, and consent for a credit check using every Basic Field type provided by Zoho Creator's Form Builder.
- Loan_Application_Report : A list view of all submitted loan applications enabling loan officers to filter, pre-screen, and route applications for document verification and approval.

03 · PROCEDURE

A new application, Loan Application & Pre-Screening Management, was built using the Zoho Creator Form Builder. The form was structured into logical, applicant-friendly sections:

- Section A - Personal Details: Captures Applicant Name (First Name, Last Name), Date of Birth, and PAN Number.
- Section B - Contact Details: Captures Email Address, Contact Number, and Residential Address.
- Section C - Income & Employment Details: Captures Employment Type (Salaried / Self-Employed), Monthly Income, and Existing Liabilities.
- Section D - Loan Details & Consent: Captures Loan Type, Purpose of Loan, Preferred Callback Time, and Consent for a credit bureau check.

04 · OUTPUT :

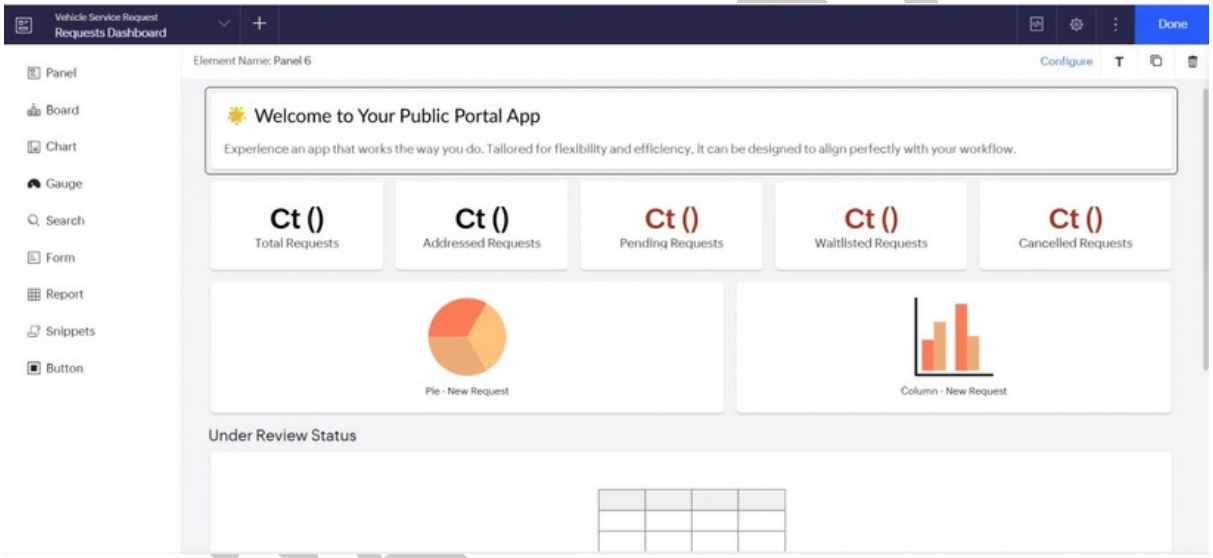

Fig. 1 — Form Builder: Loan_Application_Form showing all 13 mapped basic fields arranged in the four logical sections.

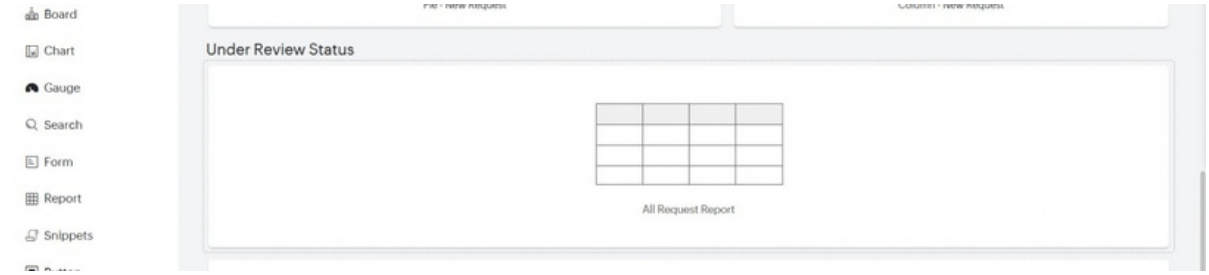

Fig. 2 — Live Preview: The published public form link accessible to prospective borrowers.

Widget Layout: List panels on top, Donut and Column charts side by side beneath them, the Line chart and embedded report following, and the “View All loans” button anchored at the bottom.

Live Dashboard — Booking Overview :

Fig. 3 — Loan_Application_Report: Sample submitted records filtered by Loan Type and Monthly Income for loan officer pre-screening.

Sidebar drill-downs: Request Kanban → All Requests → New Request

All_Loan_Report — Sample Records :

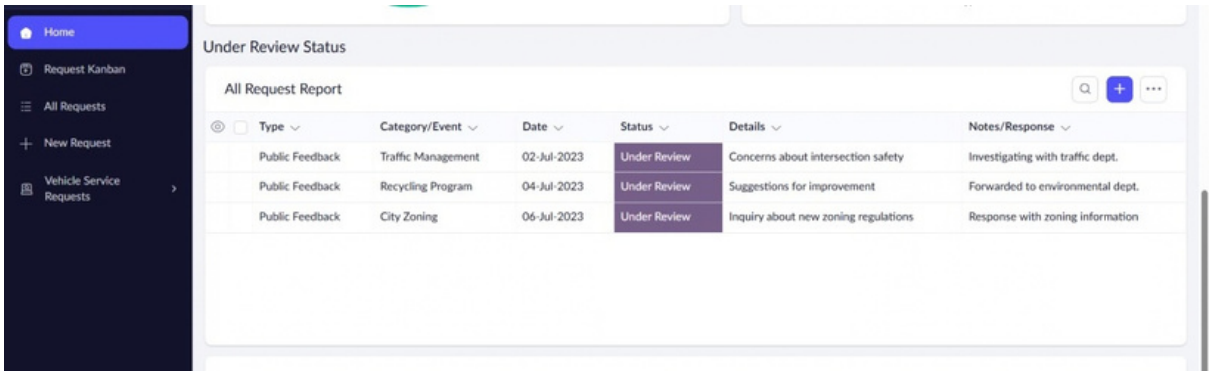

Fig. 4 — All_Bookings_Report: sample booking records with Status = "Under Review" and internal follow-up notes

RESULT :

The Loan Application & Pre-Screening Management application was successfully designed and built. It effectively captures prospective borrower data using all thirteen Basic Fields, enforces strict formatting and range validation rules, and generates a structured report to facilitate efficient pre-screening and verification workflows by bank loan officers.
