

Zoho Creator Visual Guide

1.Zoho Creator AI Application Generator Landing Page:

This screenshot shows the homepage of Zoho Creator highlighting its AI-powered, low-code app creation feature. Users can simply type their business app requirements into a prompt box to automatically generate a functional application in seconds.

2.Zoho Creator Sign-In / Authentication Portal

This screenshot shows the login interface for accessing Zoho Creator using credentials or third-party single sign-on (SSO) options. It highlights multi-factor authentication (MFA) to ensure secure user access to low-code development workspaces

3.Zoho Creator User Dashboard:

This screenshot displays the main Zoho Creator workspace dashboard, showcasing existing low-code applications like "Ajay_Low_Code_Project." It serves as the central hub where developers can manage apps, access deployment environments, and start building new applications.

4.Multi-Stage Environments Dashboard:

This view shows Zoho Creator's application deployment pipeline divided into Development, Stage, and Production environments. It allows developers to test app updates safely in lower environments before pushing live changes to real users.

5. User Management and Role-Based Access

This screen displays the user administration section of Zoho Creator, where admins can manage user access and permission levels. It uses role-based access control (RBAC) to ensure team members only see and edit the specific applications or data assigned to them.

6. Organization Settings & Profile Setup:

This screen shows the Organization management page in Zoho Creator, where you configure company profile details, branding logos, and contact information. It allows administrators to customize workspace preferences like time zones and namespaces across all low-code projects.

7. Metrics and Application Analytics Dashboard:

This screen shows the Metrics dashboard in Zoho Creator, which tracks usage trends, user activity, and application hit counts across your projects. It helps administrators monitor app performance, identify anomalies, and analyze overall low-code platform usage.

8. Billing and Subscription Management:

This screen shows the Billing section of Zoho Creator, displaying current subscription details, trial status, and account resource usage like active users and apps. It enables organization admins to manage plan upgrades and purchase additional add-ons as their low-code requirements grow.

9.Live Custom Application Home Dashboard:

This view shows the user-facing home screen of a custom bug-tracking application built using Zoho Creator. It features summary cards, visual analytical charts (pie, donut, and bar graphs), and a data table listing recorded bug reports for real-time tracking.

10.Detailed Data Report View (All Bugs):

This screen displays a detailed list of all bugs reported in the application, organized in a clean tabular grid. The table includes columns for bug title, date reported, severity, status, and description. The interface also features a sidebar for navigation and a footer indicating the total number of records.

Bug Title	Date Reported	Severity	Status	Description
Incorrect Localization Settings	25-Jan-2024	Medium	Open	Localization settings are wrong, causing language and date format issues. Unresolved.
Payment Gateway Timeout	11-Jan-2024	Critical	Closed	Frequent timeouts during payment processing, resolved.
Report Generation Bug	15-Aug-2024	Medium	Open	Users can't generate reports correctly, data issues.
Email Notification Failure	06-Mar-2023	Medium	Closed	Users weren't getting system email notifications. Issue resolved.
Login Page Error	14-Dec-2023	Medium	Escalated	Users can't log in due to errors on the login page.

Showing 5 of 5

This screen displays a list report view in Zoho Creator, showing logged entries like bug titles, reported dates, severity levels, and statuses in a clean tabular grid. It provides end-users with an organized interface to filter, search, and review stored application data in real time.

11.Task Tracking Report View (All Tasks):

Task name	Due Date	Priority	Status	Description
Software Version Update	09-Feb-2024	High	Completed	Awaiting IT department's schedule
Inventory Check	31-Dec-2023	Medium	In-Progress	Scheduled for end of the month
Plan Marketing Campaign	25-Jan-2024	Medium	In Review	Survey draft ready, needs approval
Update Website Content	19-Jan-2024	Low	Yet to Start	waiting product details from team
Finalise Quarterly Reports	21-Dec-2023	High	In-Progress	Draft completed, final review pending

This screen shows a structured report table in Zoho Creator displaying managed task records, including task names, due dates, priorities, and current statuses. It allows team members to quickly monitor pending work, track project deadlines, and update task progress.

12.Interactive Data Entry Form:

Self Service Form

Creator tip: Use this sample form to capture data. Below is an example of how it may look.
Feel free to tweak things via the form builder. Every form submission is recorded in a report and can be visualized.
Note: If you're capturing sensitive data via a field, take a look at its properties to make it secured.

What do you want to track?

- Tasks
- Bugs
- Projects
- Expenses
- Assets
- Something else

This screen displays a user-facing input form in Zoho Creator featuring a dropdown menu to select tracking categories like Tasks, Bugs, or Assets. It allows end-users to easily submit new records into the application, which automatically updates linked reports and dashboards.

13.Create New Application Options:

This screen displays the creation options in Zoho Creator for starting a new project. Developers can choose to build an app using Zia AI, start from scratch, pick a pre-built template from the gallery, or import existing data files.

14.GenAI App Builder Prompt Screen:

This screen displays Zoho Creator's generative AI application builder powered by Zia. Users can input plain-text business requirements and attach supporting files to automatically generate forms, workflows, and database structures instantly.
