Zoho Creator Integration with Zoho CRM

Integrating a Zoho Creator application with another Zoho service using connections and APIs

Loan Application Dashboard Zoho CRM Integration Use Case

Student Name: Ajayshankar Giridharan

Register Number: 241401007

241401007

1. Aim

To integrate a Zoho Creator application with Zoho CRM using a microservice connection, a form workflow, and Deluge scripting, so that the details submitted through a Creator form (**Loan Application Form**) are created automatically as a Lead record in Zoho CRM.

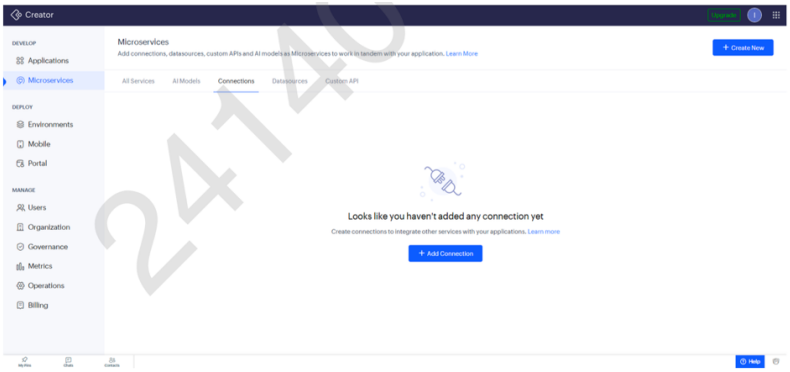

2. Procedure

Phase A: Creating the Zoho CRM Connection

1. Log in to your Zoho Creator developer account and open the **Loan Application Dashboard** application.

2. In the left navigation panel under the **Develop** section, click **Microservices** to access the centralized integration environment.

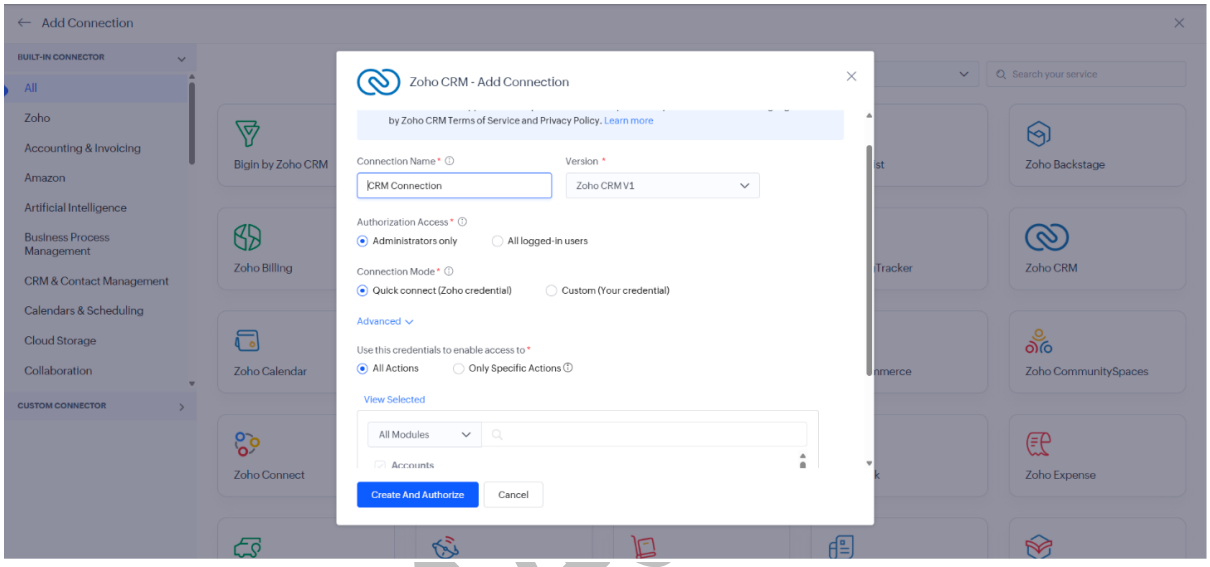

3. Open the **Connections** tab. Since no connection exists yet, the page shows "Looks like you haven't added any connection yet". Click **Add Connection**.

The Microservices page with the Connections tab selected and no connections added yet; the Add Connection button is used to start.

4. From the Built-in Connector list, select **Zoho CRM**. In the **Zoho CRM - Add Connection** dialog, enter the Connection Name (CRM Connection) and keep the Version as **Zoho CRM V1**.

5. Set **Authorization Access** to **Administrators only**, **Connection Mode** to **Quick connect (Zoho credential)**, and enable access to **All Actions**. Click **Create And Authorize**.

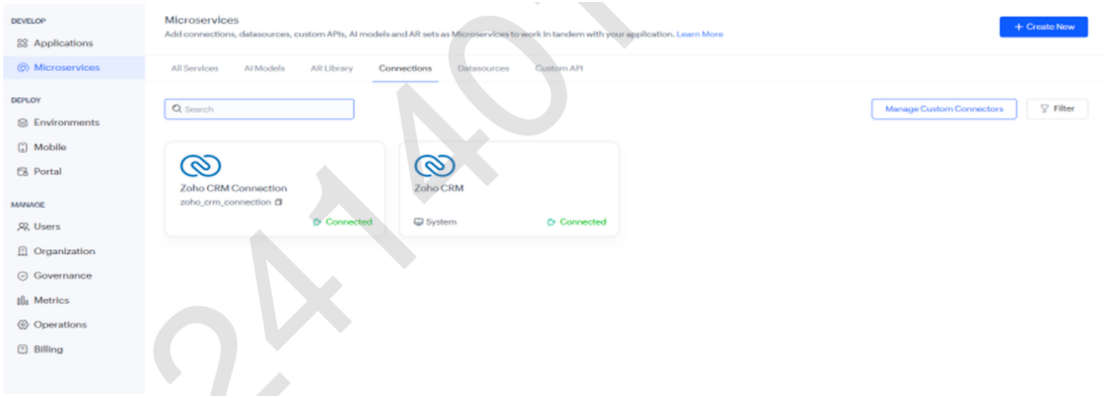

The Zoho CRM - Add Connection dialog with Authorization Access set to Administrators only, Connection Mode set to Quick connect (Zoho credential), and access enabled for All Actions, followed by Create And Authorize.

Phase B: Verifying the Connection and Application References

6. After authorization, return to **Microservices > Connections** and confirm that the **Zoho CRM Connection** card appears with the link name zoho_crm_connection and a green **Connected** status.

7. Click the **Zoho CRM Connection** asset to open its settings. Inspect the permissions granted to the connection and confirm that the **Loan Application Dashboard** application is switched **On** under Connection Access.

Phase C: Setting Up the Form Workflow

8. Navigate back to the application, select the form that submits the request (**Loan Application Form**), and click the **Workflow** tab in the top header.

9. Create a new form workflow that executes on **Created > Successful form submission**.

10. In the **Add New Action** panel, set **Run this action** to **Always**, so that every successful submission is sent to Zoho CRM, and choose **Deluge script** from the Action type grid.

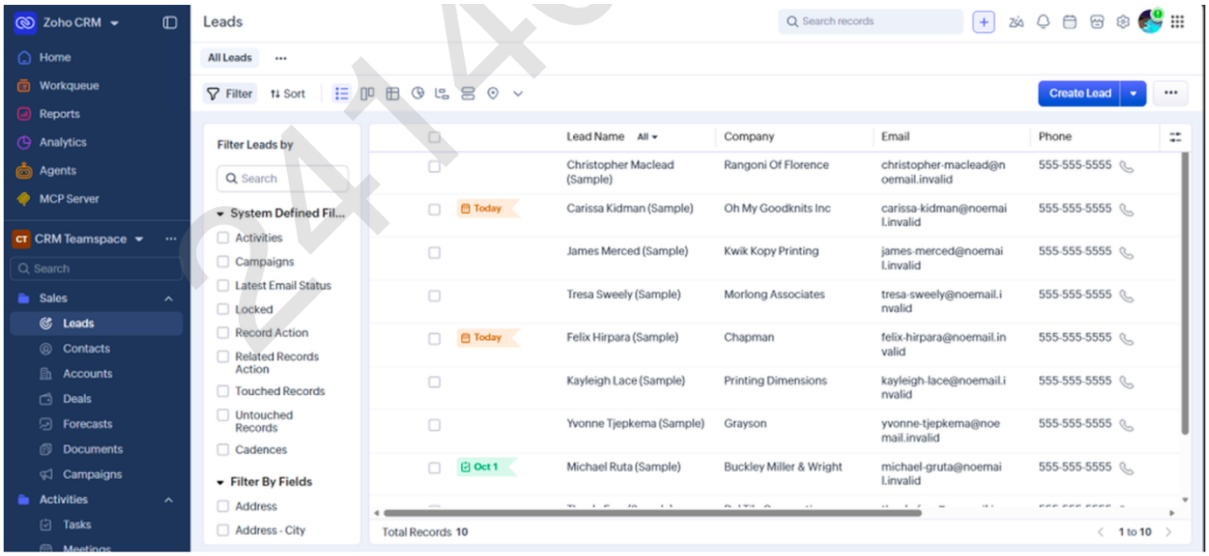

Phase D: Compiling the Deluge Script Code

11. In the Deluge editor, initialize a map named leadInfo and map the form fields to the Zoho CRM Lead fields: input.Applicant_Name to Last_Name, input.Email_Address to Email, input.Phone_Number to Phone, and loan details to Description.

12. Call zoho.crm.v8.createRecord("Leads", leadInfo, Map(), "zoho_crm_connection") to create the Lead record through the connection link name, and store the result in response.

13. Use info statements to trace the start of the CRM action and the response returned by Zoho CRM.

14. Click **Save / Update** to run the compiler validation and save the script.

The Deluge Script editor for the workflow (Loan Application Form > Created > Successful form submission > Successful submission). The script builds the leadInfo map, calls zoho.crm.v8.createRecord for the Leads module using the connection zoho_crm_connection, and traces the response using info.

The finalized Deluge script used in this workflow is reproduced below:

```
info "CRM ACTION STARTED";
leadInfo = Map();
leadInfo.put("Last_Name", input.Applicant_Name);
leadInfo.put("Email", input.Email_Address);
leadInfo.put("Phone", input.Phone_Number);
leadInfo.put("Description", "Loan Type: " + input.Loan_Type + " | Requested Amount: " +
input.Loan_Amount);
response = zoho.crm.v8.createRecord("Leads", leadInfo, Map(), "zoho_crm_connection");
info "CRM RESPONSE:";
info response;
```

4. Conclusion

The lab exercise demonstrates how to connect a low-code application to another Zoho service using
microservices, form workflows, and custom Deluge scripting. By linking the form submission to the
`zoho_crm_connection` connection, the Vehicle Service Request Dashboard project establishes a working
proof-of-concept in which submitted details are pushed automatically into Zoho CRM as Leads.
